The "making of" your new smile

Please ask your orthodontist for iLingual 3D braces. Your orthodontist has successfully achieved qualification for treating with the iLingual 3D appliance.

Together with the orthodontist you will discuss and define the treatment plan best suitable for you.

Silicone impressions will then be taken of your upper and lower jaw.

After a few weeks your individualized iLingual 3D appliance will be manufactured with state of the art CAD CAM technology ready to be fitted.

Your orthodontist will then bond the custom made appliance to your teeth and your treatment will begin. The ultra flat brackets (1.6mm) and individualized positioning gives maximum patient comfort.

Step by step the precise arch wire sequences will bring your teeth into the correct position. First improvements can be seen shortly afterwards.

The perfect three dimensional changes in the position of your teeth, is brought as a result of the accurate individualization brought about in the laboratory procedure.

FOR YOUR INFORMATION

PRACTICALLY ANY MISALIGNED TEETH CAN BE CORRECTED IN PATIENTS OF ALL AGES SUBJECT TO CLINICAL AND DIAGNOSTIC EVALUATION BY YOUR ORTHODONTIST.
